

What is Revolution?

FOR CATS:

Revolution is an easy-to-administer, all-in-one flea treatment for cats and dogs that simply works inside and out for a full month.

Revolution is extremely effective in keeping cats safe from roundworm and ear mites, too. Unlike many other 'topical' (i.e. administered externally onto the body) parasiticides designed to treat fleas and other parasites in cats, Revolution is not a scheduled poison and is approved for use with kittens as young as 6 weeks old, as well as pregnant and lactating females.

Revolution is available in a range of sizes to suit any cat. You simply squeeze it onto the skin on the back of your cat's neck every month.

How to use Revolution

Revolution is quick-drying, non-greasy and waterfast, with no unpleasant odour, so you can cuddle and play with your cat as soon as Revolution has dried.

Once a month, simply squeeze Revolution out and onto the skin just in front of your cat's shoulder blades. Your cat will be protected against fleas (including their eggs and larvae) and other parasites for the next 30 days. No pills to mash into your cat's food. No sticky sprays. No more juggling lots of different products.

In the unlikely event you bathe your cat two hours after applying Revolution, rest assured knowing Revolution will be unaffected, remaining completely effective.

- Hold tube upright
- Press cap down until you hear a click (meaning the cap has punctured the tip of the tube)
- Remove cap and check tube tip is clear and open

- Part the hair at the base of your cat's neck
- Place the tube onto a visible area of skin
- Squeeze tube 3 or 4 times onto just one spot until empty. Keep tube squeezed to avoid drawing liquid back into tube

- - While keeping the tube squeezed, drag it along and away from the liquid, then lift up to remove
 - Ensure tube has been emptied

How Revolution works

Revolution simply works inside and out.

Once you've applied it, Revolution for Cats is quickly absorbed into your pet's bloodstream, killing any roundworm intestinal larvae, it encounters. As it moves into your cat's skin and hair, it gets down to the business of killing fleas and other external parasites. Revolution for Cats will then continue to fully protect your cat for an entire month, regardless of how long your cat's hair is. After the month is up, a new dose needs to be applied.

If you've administered Revolution for Cats correctly and in line with the recommended dosing schedule, you and your cat can rely on protection from the following:

Fleas

Revolution treats, controls and prevents flea infestations on your cat as well as in your cat's day-to-day surroundings. Adult fleas are killed, flea eggs don't hatch, and flea larvae are killed or prevented from developing into adults. Because it's a comprehensive flea treatment, it also controls flea allergy dermatitis.

Roundworm

Revolution enters the bloodstream to prevent ailments related to this insidious parasite.

Ear Mites

Revolution treats, controls and prevents intensely irritating ear mite infestations.

Fleas, and the importance of treating surrounding areas

Did you know that the fleas on your cat represent only about 5% of the total flea population your feline friend is living with? So where are the other 95%? They're happily existing in your cat's everyday indoor and outdoor living environments.

Revolution for Cats targets that massive 95% of fleas by hitching a ride on the hair and dander your cat sheds in and around your home. Over time, as the Revolution absorbed into these tissues comes into contact with the fleas, eggs and larvae in those living areas, it either kills them, stops them from hatching, or prevents them from reaching adulthood and continuing their creepy little life cycles. So for once, cat hair is actually a good thing

FOR DOGS:

Revolution is an easy-to-administer, all-in-one flea treatment for dogs that simply works inside and out for a full month.

Revolution is extremely effective in keeping dogs safe from ear mites and sarcoptic mange mites (scabies), too.

Unlike many other 'topical' (i.e. administered externally onto the body) parasiticides designed to treat fleas and other parasites in dogs, Revolution is not a scheduled poison and is approved for use with puppies as young as 6 weeks old, as well as pregnant and lactating females.

Revolution is available in a range of sizes to suit any dog. You simply squeeze it onto the skin on the back of your dog's neck every month.

How to use Revolution

Revolution is quick-drying, non-greasy and waterfast, with no unpleasant odour, so you can cuddle and play with your dog as soon as Revolution has dried. Revolution will remain effective even if you bathe your dog two hours after applying it.

Once a month, simply squeeze Revolution out and onto the skin just in front of your dog's shoulder blades. Your dog will receive protection against fleas (including their eggs and larvae) and other parasites for the next 30 days. No pills to mash into your dog's food. No sticky sprays. No more juggling lots of different products.

- Hold tube upright
- Press cap down until you hear a click (meaning the cap has punctured the tip of the tube)

How Revolution works

Revolution simply works inside and out.

Once you've applied it, Revolution for Dogs is quickly absorbed into your pet's bloodstream. As it moves into your dog's skin and hair, it gets down to the business of killing fleas and other parasites. Revolution for Dogs will then continue to protect your dog for an entire month, regardless of how long your dog's hair is or the number of baths your dog has in that time. After the month is up, a new dose needs to be applied.

If you've administered Revolution for Dogs correctly and in line with the recommended dosing schedule, you and your dog can rely on protection from the following:

Fleas

Revolution treats, controls and prevents flea infestations on your dog as well as in your dog's day-to-day surroundings. Adult fleas are killed, flea eggs don't hatch, and flea larvae are killed or prevented from developing into adults. As a comprehensive flea treatment, it also controls flea allergy dermatitis.

•

Roundworm

Revolution is an aid in the treatment and control of roundworms (*Toxocara canis* and *Toxascaris leonina*).

•

Sarcoptic Mange

Revolution treats, controls and prevents this highly contagious and irritating skin disease by killing the mites that cause it.

•

Ear Mites

Revolution treats, controls and prevents intensely irritating ear mite infestations.
